TenderPilot

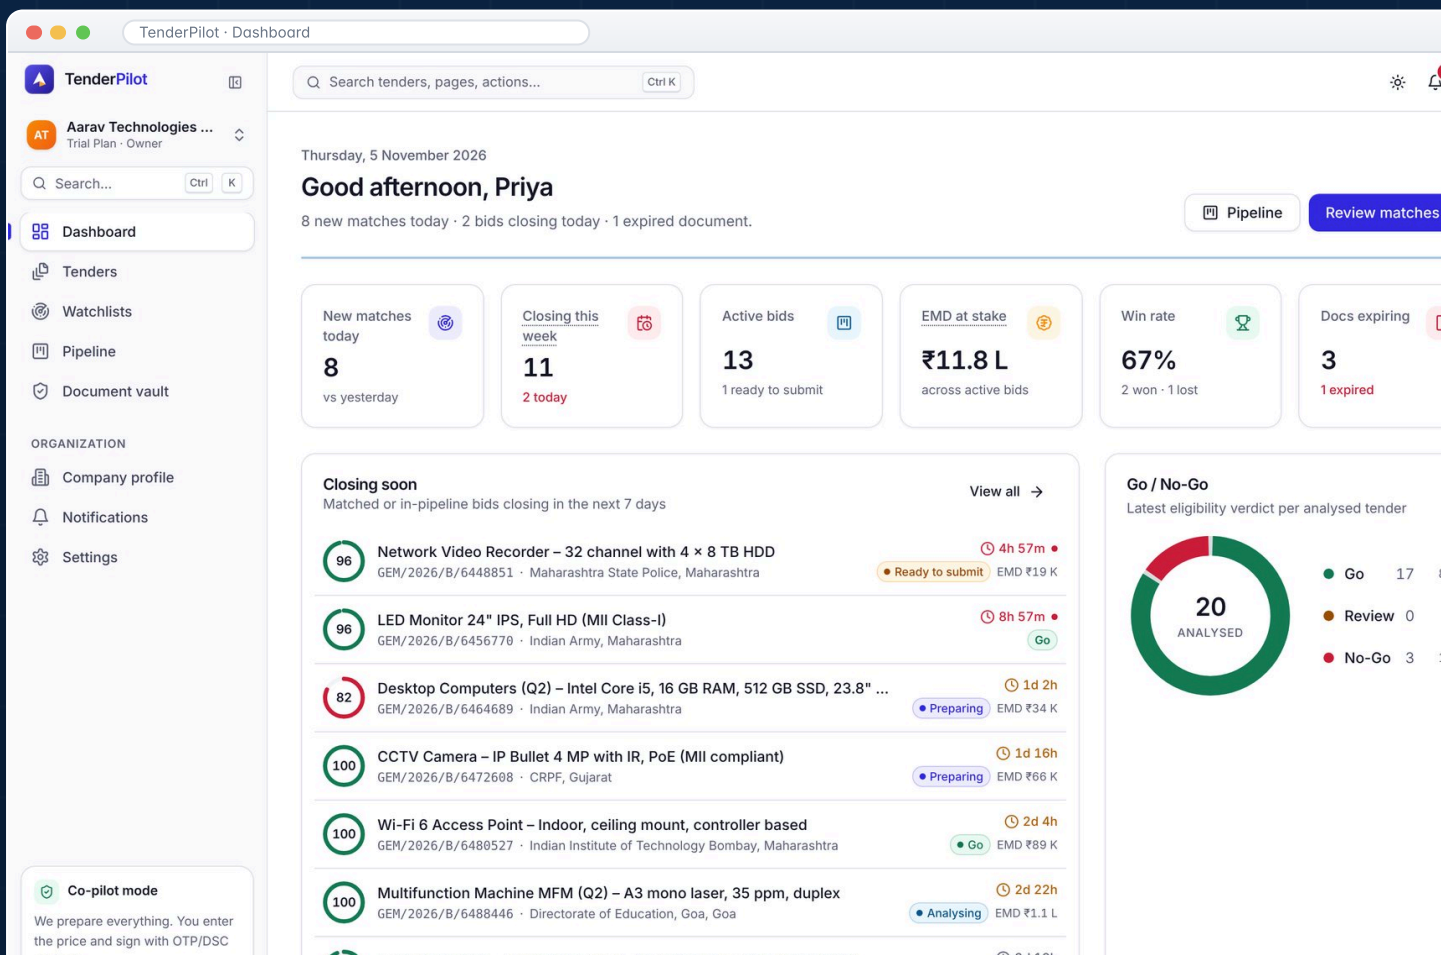

CONCEPT NOTE

Win more GeM bids with a co-pilot that *never takes the wheel*

How TenderPilot helps MSMEs, OEMs and resellers find the right Government e-Marketplace bids, decide faster, and submit complete, compliant bids, while your team keeps control of every price and signature.

Date	Prepared for	Document
November 2026	**Leadership and bid team**	**Concept note, v1.0**

Confidential. Prepared for the named recipient only; not for onward distribution.

TenderPilot turns GeM bidding from a late-night scramble into a ten-minute routine that your team still signs off

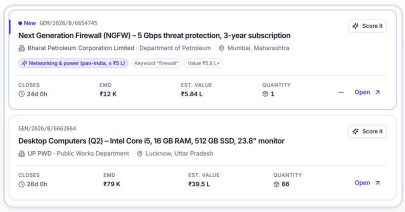

GeM publishes more opportunity than any bid desk can read. Most of a bid team's day goes on finding, reading and assembling, not on winning. TenderPilot does that groundwork continuously, explains every recommendation, and hands your team a ready packet. Price, authentication and the final click stay with your people.

1

Identify

TenderPilot watches GeM around the clock for bids that match what you sell, where you sell and to whom.

- Alerts on WhatsApp, email and in-app
- Corrigenda flagged the moment they appear

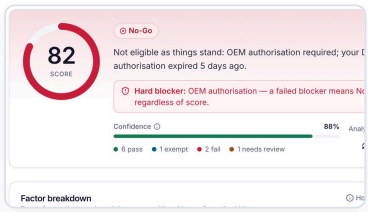

2

Analyse

It reads the bid documents, checks them against your company profile and gives a Go/No-Go score with its reasons.

- Each reason linked to the page it came from
- Exemptions and preferences applied

3

Apply

It pulls certificates from your vault, fills the undertakings and merges one bid packet in the order GeM expects.

- Expiry alerts before a certificate lapses
- A checklist for the steps only a person can do

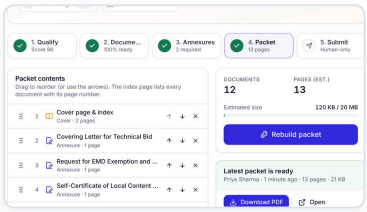

EXHIBIT 1 What changes for a typical bid desk

3 h → 10 min	< 1 hour	Minutes	Zero
to assemble a complete bid packet	from publication on GeM to an alert on your phone	to a Go/No-Go decision, with reasons and evidence	GeM passwords held. Your team does every submission.
TARGET	TARGET	ILLUSTRATIVE	BY DESIGN

Source: TenderPilot team analysis; illustrative. Figures are targets, not measured client results. They will be baselined during your pilot.

What this means for leadership

More of the right bids

Your team sees every relevant bid early and does not lose one to a missed corrigendum or deadline.

Fewer wasted bids

Bids you cannot win are ruled out in minutes, before anyone spends a day on them.

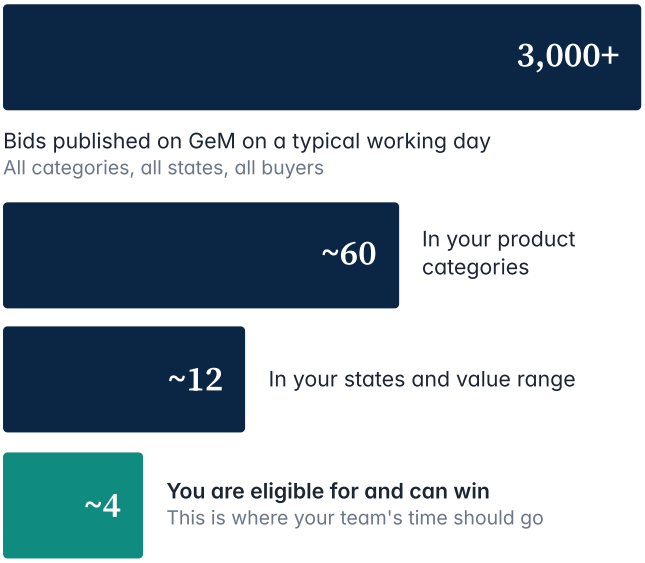

No risk to the account

Humans keep price, OTP/DSC/e-Sign and the final submit, so your GeM seller account stays protected.

GeM is a large market, but bid teams spend most of their time before they even decide to bid

GeM handled more than ₹4 lakh crore of public orders in FY 2023-24, and thousands of bids go live on a typical working day. For a seller the hard part is not access. It is separating the few bids you can win from the many you cannot, and then getting each one right.

EXHIBIT 2 From the daily flood to the bids worth your time

Source: GeM public statements (order value); TenderPilot team analysis for a typical IT-hardware seller; illustrative.

WHERE BIDS ARE LOST

01 Volume and noise
Someone scans the portal every day. Relevant bids get found late, or not at all.

02 Eligibility fine print
Turnover, experience, OEM authorisation and Make in India clauses sit deep in long bid documents.

03 Corrigenda
Changed dates, specifications or terms are easy to miss once a bid is being prepared.

04 Document chasing
Certificates live in inboxes and on personal drives. An expired one is found on the closing day.

05 Deadlines and rework
Undertakings are retyped and PDFs merged by hand at night. A slip can disqualify the bid.

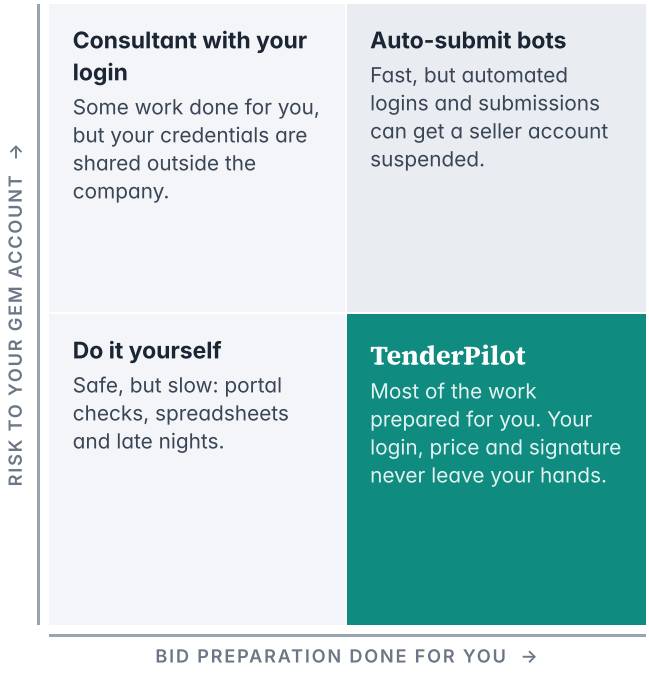

GEM TERMS IN PLAIN WORDS

EMD Earnest money deposit: a refundable amount that guarantees you will honour your bid.	**ePBG** Performance bank guarantee: security the winning seller gives, usually a % of the order value.	**MSE** Micro and small enterprise (Udyam-registered). Often exempt from EMD and some turnover or experience rules.	**Make in India Class-I / II** Local-content classes (≥50% / ≥20%). Class-I suppliers get purchase preference.
ATC Additional terms and conditions a buyer adds to the standard GeM terms. Often where the traps are.	**BOQ** Bill of quantities: the itemised list of what the buyer wants, in what quantity.	**Corrigendum** An official change to a published bid, such as a new date, specification or term.	**OTP / DSC / e-Sign** The ways a person legally authenticates a GeM submission: one-time password, digital signature certificate or Aadhaar e-Sign.

A co-pilot, not an autopilot: TenderPilot prepares everything, and your team keeps the controls that protect your GeM account

GeM expects a named person to enter the price and authenticate every bid. Shared logins and bots that submit on your behalf risk your seller account. TenderPilot is built around that rule, so it does the most preparation for the least account risk.

EXHIBIT 3 Bid preparation done for you vs. risk to your account

Source: TenderPilot team analysis; illustrative positioning.

TENDERPILOT PREPARES	YOUR TEAM ALWAYS DOES
✓ Finds and filters matching bids	● Decides whether to bid
✓ Reads bid documents and corrigenda	● Enters the price on GeM
✓ Checks eligibility and scores Go/No-Go	● Authenticates with OTP, DSC or e-Sign
✓ Fills undertakings and annexures	● Solves the CAPTCHA
✓ Merges the bid packet in order	● Clicks Final Submit
✓ Pre-fills non-financial GeM fields, only when you click	

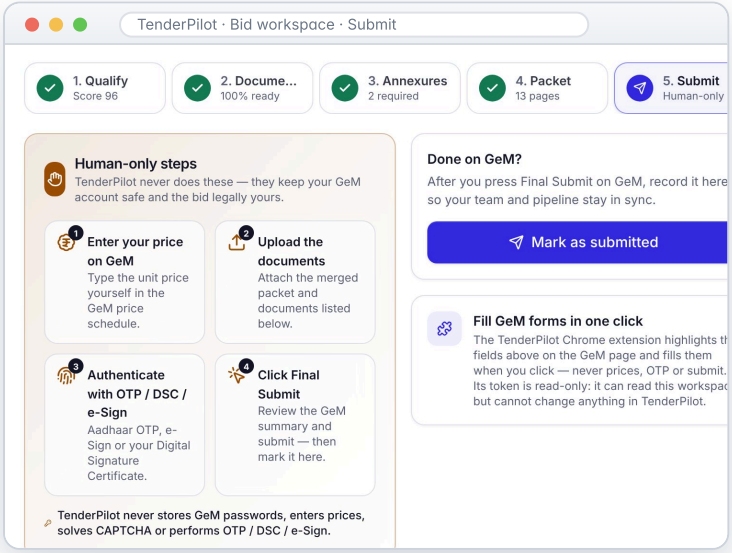

EXHIBIT 4 The human-only steps are part of the product

At the submit step every bid workspace lists the four actions only your team performs: enter the price, upload the packet, authenticate, and click Final Submit. When the bid is in, a named person marks it submitted, so the pipeline and audit trail stay accurate.

Why it matters: your compliance position is simple to explain to auditors, OEM partners and buyers. TenderPilot never holds your GeM password.

Screenshot: TenderPilot bid workspace, submit step.

Every bid you can win reaches the right person within the hour, on the channel they already use

Your team describes what you sell once. TenderPilot watches GeM continuously and brings back only the bids that fit, already sorted by closing date and fit.

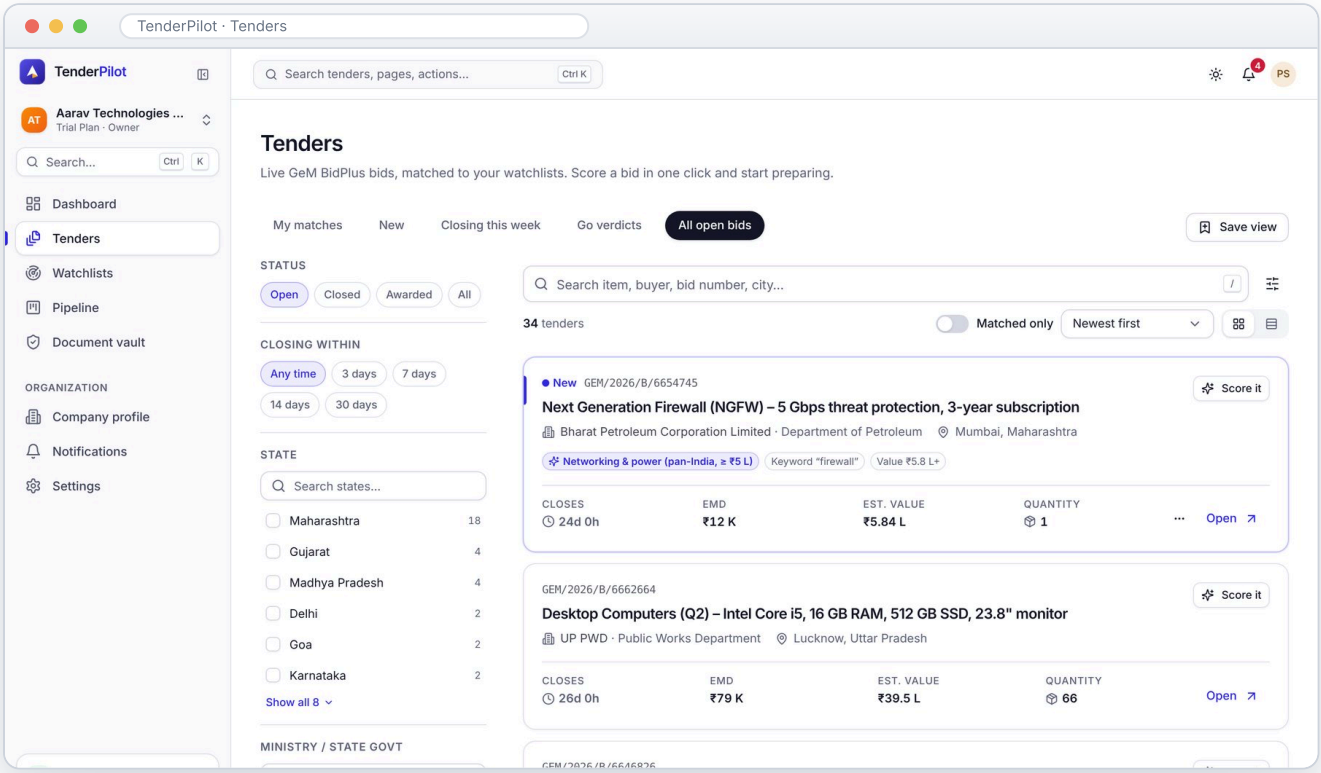

Exhibit 5: The tender feed shows live GeM bids matched to your watchlists, with filters by state, ministry, closing date and value.

Always-on watchlists

Match by product and keyword, GeM category, state and city, buyer ministry or organisation, and order value. One watchlist per product line or region.

Instant alerts, wherever you are

New matches, corrigenda, closing-day reminders and expiring certificates go out on WhatsApp, email and in-app, with a daily digest for the owner.

Triage in one view

Saved views such as "closing this week" or "Go verdicts" let the bid manager plan the week in a few minutes.

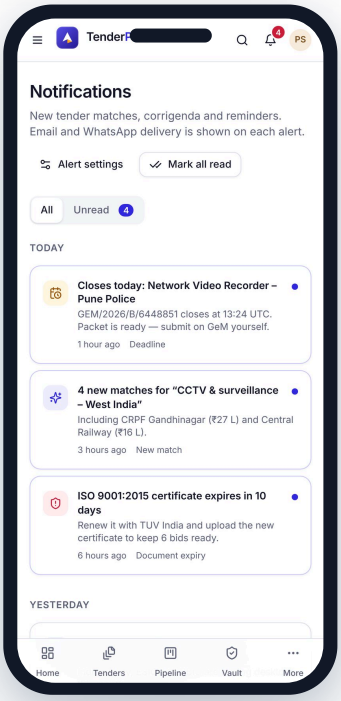

Exhibit 6: Alerts on mobile

A Go/No-Go verdict in minutes, with every reason traced back to the page of the bid it came from

TenderPilot reads the bid document and any corrigenda, checks each condition against your company profile and vault, and explains its verdict. In the example below it stops a bid early: the bid needs an OEM authorisation that expired five days ago.

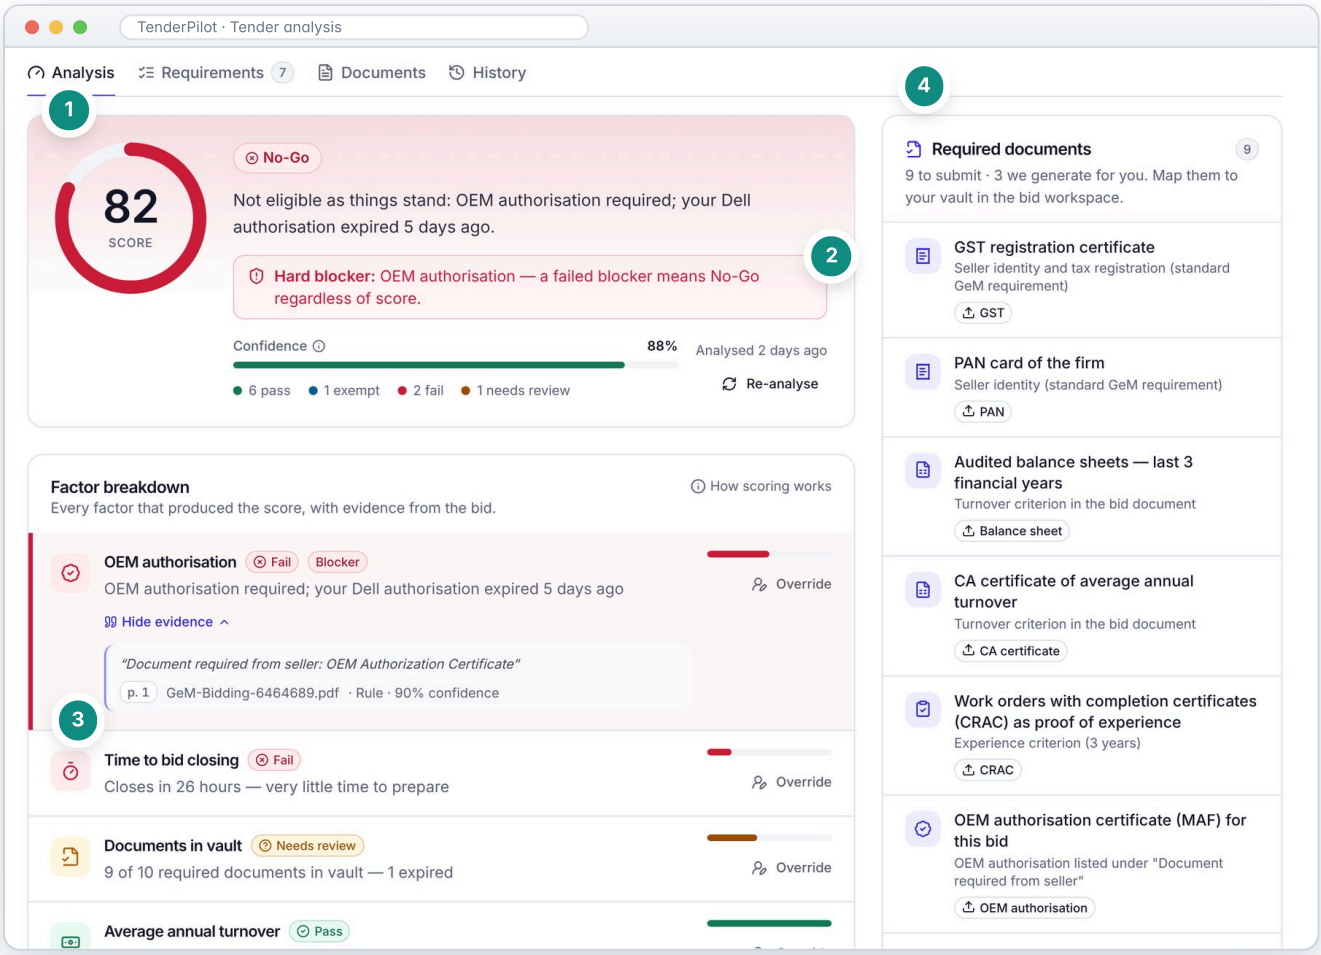

Exhibit 7: Tender analysis for a desktop-computer bid from the Indian Army. Illustrative sample company.

1

Score and verdict

A single score with a plain-language Go, Review or No-Go, and how confident TenderPilot is.

2

Hard blockers first

Disqualifying conditions override the score, so a high number never hides a fatal gap.

3

Evidence, not opinion

Each factor quotes the bid text and page. Your analyst can check it, or override it with a note.

4

Document checklist

Every document the bid asks for, mapped to your vault, with the ones TenderPilot can generate marked.

What TenderPilot checks on every bid

- Average annual turnover
- Years of experience
- Similar work value
- OEM authorisation
- MSE and Startup exemptions
- Make in India Class-I / II
- EMD and ePBG
- Certificates and validity
- Delivery location and time
- Time left to prepare
- ATC clauses
- Documents in your vault

From a Go decision to a submission-ready bid packet in about ten minutes, with nothing expired and nothing missing

1 · Vault
Certificates matched to the bid's checklist

2 · Annexures
Undertakings filled from your profile

3 · Packet
One merged PDF in GeM order

4 · Submit
Your team prices and signs on GeM

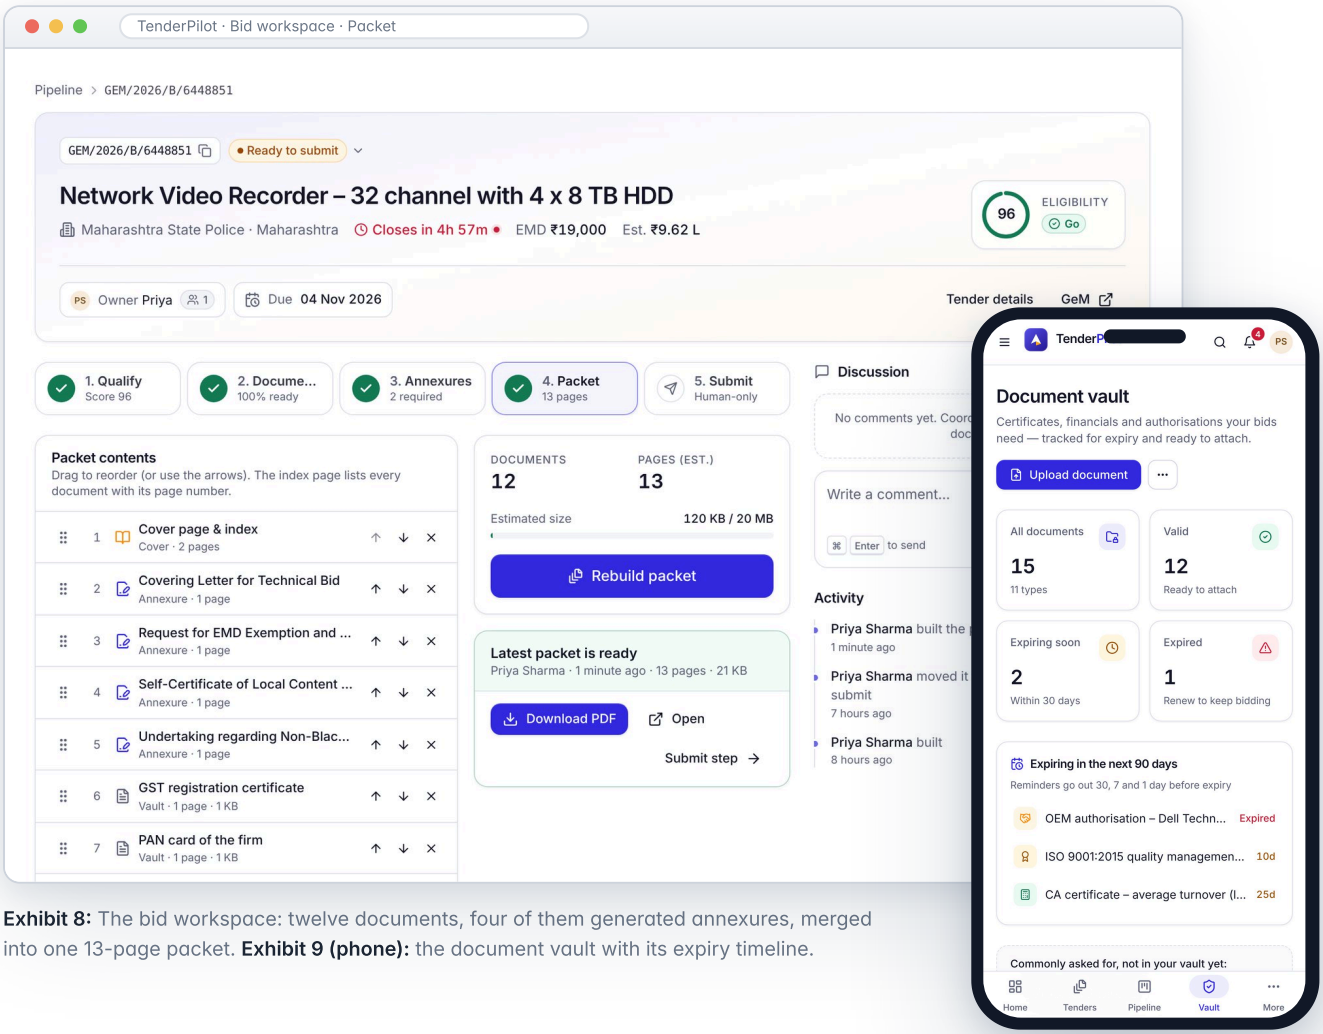

Exhibit 8: The bid workspace: twelve documents, four of them generated annexures, merged into one 13-page packet. **Exhibit 9 (phone):** the document vault with its expiry timeline.

Document vault with expiry alerts

GST, PAN, Udyam, ISO, balance sheets, CA certificates, completion certificates and OEM authorisations in one place. Reminders go out 30, 7 and 1 day before expiry.

Undertakings, written for you

EMD exemption requests, Make in India self-certificates, non-blacklisting undertakings and covering letters are filled from your profile and the bid, ready to sign and stamp.

One click to a packet, then you submit

The packet comes with a cover index and the file order GeM expects. A submission assistant lists the values to enter and the steps your team completes on GeM.

Your bid desk gets back about three hours on every bid, and spends them on price and buyer relationships

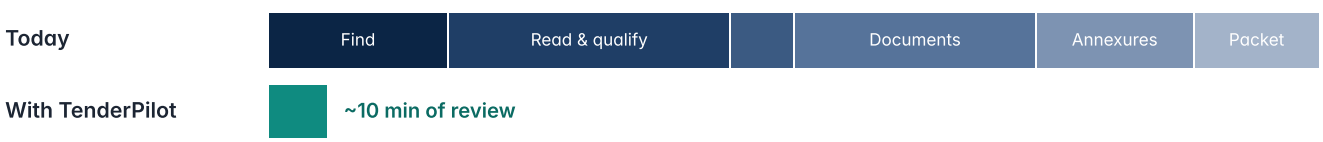

The work does not disappear. It moves from people to TenderPilot, and the time that is left goes to the decisions only your team can make.

EXHIBIT 10 One bid, before and after TenderPilot

STEP	TODAY	WITH TENDERPILOT	TIME SAVED
Find the bid	Daily manual scan of the portal across categories and states	Matched automatically; alert within the hour	~30 min
Read and qualify	Read a 20 to 60 page bid and ATC; check eligibility by hand	Go/No-Go with reasons and page references	~45 min
Track corrigenda	Re-open the bid page and hope nothing changed	Changes flagged and re-checked automatically	~10 min
Gather documents	Chase colleagues and drives; expired certificates found late	Pulled from the vault; expiries flagged weeks ahead	~40 min
Undertakings and annexures	Retype last bid's Word templates, fix names and numbers	Generated from your profile and the bid	~25 min
Assemble the packet	Convert, merge, rename and order PDFs by hand	One click; merged PDF with index	~20 min
Total per bid	**~3 hours, often after hours**	**~10 minutes of review**	**~2 h 50 min**

Source: TenderPilot team analysis of a typical goods bid; illustrative. Price entry and authentication on GeM are not included and stay with your team.

EXHIBIT 11 Minutes of team effort per bid, by step

Bar length is proportional to minutes per bid (today ≈ 180 minutes).

~45 h
returned each month at 15 bids a month
ILLUSTRATIVE

0
bids lost to expired documents or missed corrigenda
TARGET

2×
bids your current team can pursue each month
TARGET

Earlier
No-Go calls, so effort goes only to bids you can win
EXPECTED

Each person on the bid desk sees the part of the work they own, from the owner's phone to the analyst's checklist

EXHIBIT 12 Who uses TenderPilot, and for what

ROLE	WHAT THEY SEE	THE QUESTION IT ANSWERS
Owner / MD	Mobile dashboard: new matches, bids closing, EMD at stake, win rate, documents expiring	"Are we bidding on the right things, and is anything about to slip?"
Bid manager	Pipeline board from Identified to Won or Lost, with owners, due dates and packet readiness	"Who is on which bid, and what is blocking it?"
Bid analyst	Tender analysis, requirement checklist, annexures and the packet builder	"Do we qualify, and what is still missing?"
Compliance / accounts	Document vault, expiry timeline and the audit trail of who did what	"Is every certificate valid on the closing date?"
Viewer	Read-only access for partners, OEMs or auditors you invite	"What was submitted, and on what basis?"

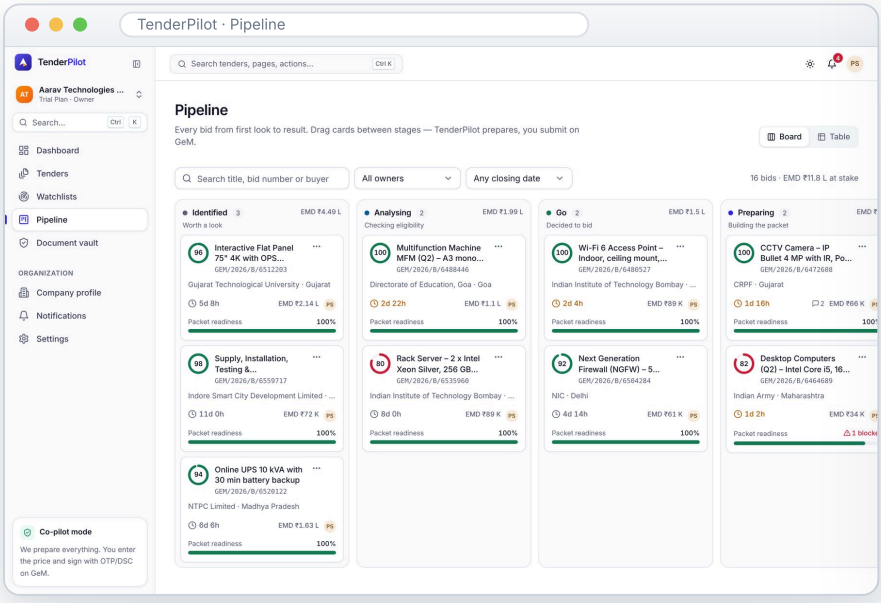

Exhibit 13: The bid manager's pipeline: every bid by stage, with score, closing time, EMD and packet readiness.

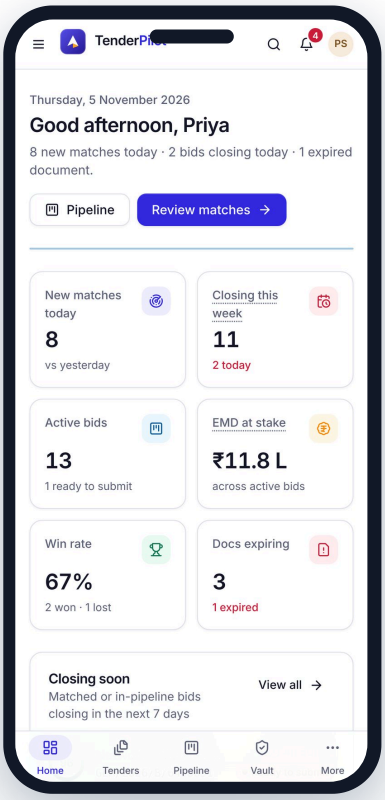

Exhibit 14: The owner's dashboard

Your data, your GeM account and your decisions stay yours: security is part of the design

Bid documents, financials and certificates are among the most sensitive files a company holds. TenderPilot treats them that way and keeps your GeM seller account out of reach.

A separate space for each company

Every company's bids, documents and analyses are kept apart. No other customer can see or reach them.

Role-based access

Owners, bid managers, analysts and viewers each see and do only what their role allows. You invite and remove people yourself.

Complete audit trail

Every analysis, override, document change, packet and submission record shows who did it and when.

Your data stays yours

You own everything you upload or create. Export it whenever you like, and have it deleted if you leave.

No GeM credentials stored

TenderPilot reads public bid information only. It never asks for, stores or uses your GeM login.

Enterprise-grade cloud

Hosted on enterprise-grade cloud infrastructure, with encrypted connections and continuous monitoring.

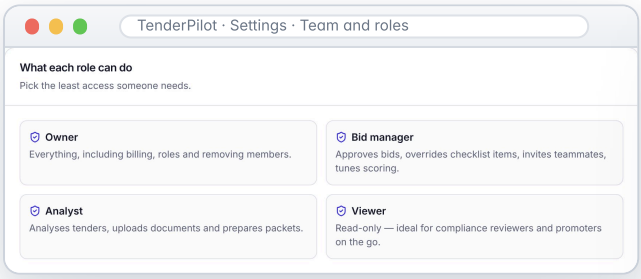

Exhibit 18: Four roles, with least access by default. Viewers suit compliance reviewers and promoters.

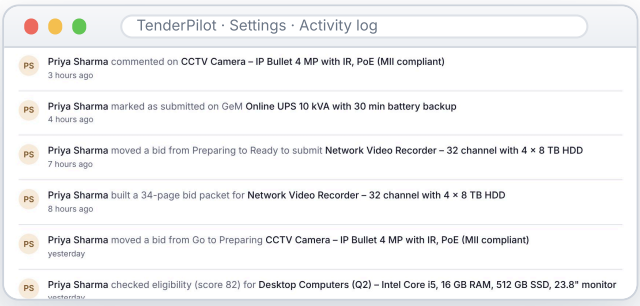

Exhibit 19: The activity log records who did what, and when, in IST.

What TenderPilot never does

These limits are fixed in the product. No setting or plan turns them off.

× Ask for your password
Your GeM login stays with your team.

× Enter or suggest a price
Your financial bid is yours alone.

× Authenticate for you
No OTP, DSC or Aadhaar e-Sign.

× Solve a CAPTCHA
No bots on your seller account.

× Click Final Submit
A named person does that, every time.

Live in days, proven in a four-week pilot, then scaled on success metrics we agree at the start

EXHIBIT 15 From kick-off to full rollout

Onboard · days 1 to 5
Company profile, watchlists for each product line, upload certificates to the vault

Pilot · weeks 1 to 4
Live bids and alerts; weekly review with your bid manager; tune watchlists and templates

Rollout · month 2 onward
Whole team on board, WhatsApp digests, more categories, entities and regions

EXHIBIT 16 Success metrics we track together

METRIC	PILOT TARGET
Time from GeM publication to alert	< 1 hour
Time to a Go/No-Go decision	same day
Time to assemble a bid packet	~10 min
Relevant bids reviewed per week	vs. baseline
Bids missed or lost on documents	zero
Win rate on bids submitted	tracked

Baselines are measured in week 1 of the pilot. Targets are indicative.

WHAT YOU PROVIDE

01 **A named bid owner**
About 2 hours in week 1, then 30 minutes a week

02 **Company documents**
Registrations, financials, experience and OEM letters

03 **Your product focus**
Categories, states and value bands you want to win

EXHIBIT 17 Indicative pricing, per company per month, excluding GST

STARTER
₹2,999 / month
For a founder-led MSME bidding a few times a month

- ✓ 3 team members, 5 watchlists
- ✓ Email and in-app alerts
- ✓ Go/No-Go scoring, vault, packet builder

PRO · RECOMMENDED
₹7,999 / month
For growing teams bidding every week

- ✓ 10 members, unlimited watchlists
- ✓ WhatsApp alerts and daily digest
- ✓ Assisted bid reading, annexure templates
- ✓ Form-fill assistant, pipeline and win-rate analytics

ENTERPRISE
Custom
For OEMs, distributors and consultants with many entities

- ✓ Unlimited members and entities
- ✓ Single sign-on and audit exports
- ✓ Custom eligibility rules, success manager

Indicative only; final commercials are agreed in the proposal. Every plan starts with a 14-day free trial of Pro.

TenderPilot

NEXT STEPS

See it on your own bids in thirty minutes

We run TenderPilot live on your product categories, so the first bids you see are ones you could bid on this week.

1

A 30-minute walkthrough

THIS WEEK

Live on GeM bids in your categories and states, with your bid manager in the room.

2

Onboarding in days

DAYS 1 TO 5

Company profile, watchlists and document vault set up together. Alerts start the same day.

3

Four-week pilot review

WEEK 4

We compare the success metrics with your baseline and agree the rollout plan.
